

**PROPOSAL 132**

**5 AAC 85.045. Hunting seasons and bag limits for moose.**

Shorten the moose hunting season in Units 20A and 20C as follows:

Having the moose season end five days earlier would give the moose time to calm down and most cows would be bred, and the calves would be larger going into winter.

**What is the issue you would like the board to address and why?** Moose season that runs from September 1 to September 25 gets lots of pressure the last five days when moose are getting ready to breed, this also happens the last part of October and November if the cows don't get bred in September, they get push back a whole month or two which makes the calf that much smaller going into winter.
